If we had more tokens, we would probably add profile changing. Adding photos, editing names just a personalization page. Maybe third party integration, I have worked with spotify API maybe some music with the article. I think we could add features to have full on posts with texts and links explaining. Dark mode, image upload would be something cool.

For performance, I would add:

- Pagination
- Infinite scroll
- Page-based navigation
- Load more button
- Caching
- Faster load times
- Offline support
- Service worker
